Home

Ready for your home

Ready for the future

We see Smart Home as a challenge that has to fulfil two tasks: Smart Home must make your life easier and Smart Home must not be intrusive. We achieve both through the combination of modern, tried-and-tested hardware and our app, which allows you to adapt your home to your needs without any programming effort at all.

The complementary cornerstones of evon Smart Home are security and openness. We place the highest value on the security of your data in further development. But we also try to recognize trends early and integrate them into the evon Smart Home world: Be it the control of your garden irrigation or perhaps, in the future, the charging status of your electric car.

Ready even if things go wrong

evon Smart Home is a cable-based system. All buttons, lights, blinds, etc. are wired in a star pattern and connected to the heart of the system, the evon Smart Home Controller. The advantage: If the system fails at any time, the basic functions continue to operate (light on/off ...).

Light

Ready for bright moments

Light can be controlled in the evon Smart Home via the app or via buttons. In addition, very different lights and lighting effects can be easily created using evon Smart Home scenes in the app. For example, you can assign a button that switches all lights on the way to the garage on or off simultaneously.

From the light
to the garden.

Ready for
evon Smart Home

Room climate

Relaxed homecoming

evon Smart Home can be connected directly to your heating system (for example KWB) or control the temperature in your home via room thermostats or room controllers. The evon Smart Home scenes can also be used to create rules for the indoor climate. For example, the heating can be switched off while you are out of home. On the other hand, you will be welcomed with cosy warmth as soon as you open your front door.

Shading

Let the sun in

Alongside the simple manual control of blinds, evon Smart Home allows you to control blinds automatically depending on the position of the sun. This allows heat to be generated in winter and reduced in summer. Thanks to the connection to online weather services, it can also shut down the blinds in the event of a thunderstorm.

Allergies

Combining health and comfort

Thanks to the integration of Netatmo in evon Smart Home you are constantly informed about the air quality, oxygen content and humidity. evon Smart Home supplements this information with current pollen warning values for your region. More comfort, more health.

Safety

Safety you can trust

Motion detectors, access via finger scan, a camera at the door ... these are some of the ingredients that make your home safer. evon Smart Home ensures that you get the right information at the right time. For example, the app shows you whether the postman is ringing the doorbell or someone you don't want to let in. You will be alerted when someone is moving around your house while you are on holiday.

Garden

Ready for the most beautiful garden

With evon Smart Home your garden will also become smart. You can use the app to control your irrigation and check whether your mowing robot is once again lying on its back or has done its job well for this day.

Living

Urban living with evon Smart Home

If you prefer urban life in a city apartment, you won't need the mowing robot, but can still enjoy all the other evon Smart Home benefits: Lighting, heating, blinds, health, safety ... can be controlled just as easily via an app in an apartment as in a house.

Amazon Alexa, ekey, Miele, Netatmo ...

evon Smart Home supports a multitude of extensions today already. Not only does this increase comfort of use, evon Smart Home also provides a future-proof system that you can rely on for years to come.

evon Smart Home

Light modules

LED, dimmer, RGBW integration ...

- Supports all push-buttons available on the market (no special solutions required)
- Networked with all other functions of evon Smart Home
- Time-controlled or coupled to motion detectors or light sensors
- Infinite dimmability, RGBW integration (colour, brightness)

evon Smart Home

Blind modules

Fully integrated, automatic & manual

- Fully integrated and networked with all components of the evon Smart Home solution
- Schlotterer RETROLux integration
- Automatic and manual control
- evon Smart Home Scenes adapts to your requirements – without any programming

evon Smart Home

Climate modules

Comfortable and energy-efficient

- Integration of heating, heat pumps and air conditioners in one universal solution
- Automatic operation based on time specifications
- Individual intervention at any time, on site or via the evon Smart Home App
- Automatic lowering operation when windows are open

evon Smart Home

Sound modules

Let the music play ...

- Controls background music and voice output - 2 zones (stereo) or in up to 4 zones (mono)
- FM radio receiver
- AUX input (Line-in)
- 2 free definable sound sources (Internet radio, Locale media, access to media server/NAS via UPnP)
- Voice output

evon Smart Home

Integrated security

On holiday, shopping ...

- Automatic detection and alarm for water leaks (water leak sensors)
- Smoke detectors and air quality sensors alarm when limit values are exceeded and stop the power supply or the heating if required
- Holiday function: Switching off all dangerous loads (ironing station, electric cooker, charging stations, TV, WLAN ...)
- Simulation of absence

evon Smart Home

Garden Butler

Irrigation & mowing made easy

- Husqvarna mowing robot and irrigation control
- Intelligent control using scenes (for example, no irrigation & mowing when your children celebrate a garden party)
- For example, charging of the mowing robot only with self-produced electricity

evon Smart Home

Allergy Pro

Current pollen load

- Simple setup
- Takes account of current meteorological data
- Current pollen warning for Austria, Germany and Switzerland
- Push notifications in the evon Smart Home App (time for ventilation, values above/below)
